

“Chat and Chew” on Careers

Special Effects Technician

Special effects are the images and techniques that make the ordinary look extraordinary. Depending on the nature of the effect, the job can involve a lot of hands-on work. To make the screen come alive, computer effects are a large part of the new age of multimedia. Creativity is essential, but having skills in welding, shop work, construction, and fabrication are a plus.

Individuals who work in this area usually end up in a variety of media: commercials, movies, sound recording, advertising and printing.

This is a creative field that requires skills and ingenuity.
