

“Chat and Chew” on Careers

WELDER

Welding is one of the reasons that we have sleek, polished and modern looking cars. Welders join two pieces of metal together by applying heat to melt the surfaces of the metal. This produces a permanent joint, increasing the strength and improving the appearance of metal products. This is a career that can be used in almost any field. Many workers in this field are retiring and fewer people are choosing to get training.

This means the industry is headed for a worker shortage and opportunities are wide open! Welders work anywhere that metal is used to construct or repair. Salaries can range from \$12 - \$33 per hour according to the welder's skill level.
